The following is an examiner's statement of reasons for allowance:

Parikh '978 does not teach, or suggest, the "casted copper alloy" as recited by claims 1 and 140, and new claim 141, (i) "the copper alloy has an average grain diameter of 200 microns or less in a macrostructure obtained when melted and solidified during casting," or (ii) "the copper alloy has a metal structure that contains alpha phase and one or more additional phases selected from the group consisting of (i) K phase, (ii) gamma phase, (iii) K phase and gamma phase, (iv) beta phase, and (v) mu phase, and having relation of, in terms of a content of a phase b, [b]%, in an area rate, $f_4 = [\alpha] + [\gamma] + [K] > 85$ and $f_5 = [\gamma] + [K] + 0.3[\mu] - [\beta] = 5$ to 95."

The presently claimed invention is directed to a casted copper alloy obtained when melted and solidified during casting, having grains of an average grain diameter of 200 microns or less.

On the other hand, Parikh '978 is directed to a hot worked material obtained by carrying out several steps after casting, having grains of a grain size of less than 0.015 mm (i.e., 15 microns).

According to Parikh '978, in order to produce Parikh's hot worked material having grains of a grain size of less than 15 gm, it is necessary that the base alloy of Parikh '978 be subsequently subjected to a plastic deformation process including hot rolling and recrystallization, after casting. Parikh '978, col. 3, lines 33-42. For example, the alloys of Examples III and VII in Parikh '978 are processed, after the casting process, in

accordance with the following order: hot roll, cold roll; recrystallization or RGR anneal; cold roll (CR(1)); ready to finish or RF anneal; and final cold roll to final gage.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
